Here is a vast sum of wasted capital, but it is the inevitable result of progress. Our army guns in this country will soon be in the obsolete category, for to keep pace with the rest of the world we will have to adopt smokeless powder too. A gun, oaded with it will send a bullet just twice as far as the black powder does. again the new entirely, for in the batt es of the the load, for the runaway had got al. future troops will never display themselves en masse to the enemy. Open tory. fighting, as has been customary through all the ages, is a thing of the past, for it would mean utter annihilation. If smokeless powder has been in use during the late civil strife the war between the States wouldn't have lasted ninety days.

"What is the difference between a "A rapid firing gun doesn't begin to fire with the rapidity of a machine | 1809. gun. The former is usually of one barrel and is loaded with shells. It is a great gun for torpedo boats, but fifteen times to the minute is pretty good time for one of them. A mathree men to operate, practically never ceases firing, one volley succeeding another at a speed of 1,200 discharges per minute. These three men can do more silling than a whole brigade armed with old-fash oned muskets. It is a machine gun, along with the smokeless powder, that is

The meteorological instrument lately come into use, and known as the rain and snow weighing gauge, has the wonderful capacity of weighing out rain or snow in quantities representing the one-thousandth of an inca precipitation, registering each small fraction separately. The apparatus consists of two parts, the weighing gauge and the recorder, or register, so that the greatest possible accuracy is obtainable in the observations of the weather bureau. The first part is, of course, on the roof of the observatory, and is connected with the recorder by means of three electric wires, one of which is open and a few cells of electric battery inserted. The receiving ves el into which the precipitation falls and is retained rests upon ordinary weighing scales, so made that the equilibrium of the barance, whenever disturbed-as by the fall into the re- burrel. ceptacle of small particles of wateris immediately restored by the automatic move nent of a sliding weight along the balance beam, a corresponding movement taking place in the register pen of the observatory. The fall of water into the receiver depresses the beam, causing electrical contact to be made with a spring and sending a current through the magkeeps the rails!" shouted the driver, net on the balance, the action of which moves the counterweight and also sends the current through the All three men were now on the magnet on the register, thus a tuatlookout, since nothing more could be ing the recording pen. This extremely delicate instrument is said do. In less than a minute they would to work to perfection. - New York prevailed October 7. accompanied by high

Do You Wish the Finest Bread and Cake?

It is conceded that the Royal Baking Powder is the purest and strongest of all the baking powders.

The purest baking powder makes the finest, sweetest, most delicious food.

The strongest baking powder makes the lightest food. That baking powder which is both purest and strongest makes the most digestible and wholesome food.

Why should not every housekeeper avail herself of the baking powder which will give her the best food with the least trouble?

Dr. Haines, of Rush Medical College, Consulting Chemist of the Chicago Board of Health, says: "Royal is not only the purest, but the strongest baking powder with which I am acquainted."

How Helena Started.

The mines which built the city of Helena, in Montana, were discovered by a party of four prospectors who were on their way to a well-known camp in the Kootenai country. Learning that the diggings in that quarter had failed, they turned aside to prospect in another direction, and for some time wandered about, digging holes here and there, but finding nothing that they considered worth working. About noon of the 15th day of July, 1864, they arrived oh the site of the city of Helena, halted for dinner and to rest their horses. Dinner over, their horses were saddled, when one of their number walked down to the stream to get a drink before mounting. From mere force of habit he began mechanically scratching the gravel with his hands, when to his astonishment he drewout a nugget as big as a gold dollar. A hundred dollars' worth of gold was taken out in about twenty minutes. The men then immediately settled down and located claims. In a short time news of their success spread abroad. Hundreds of other miners flocked to the spot, and a vill try the Prescriptor. miners flocked to the spot, and a mining camp of unpre edented richness was established. The city of Helena grew up on the spot, and it is MY sai that one of the banks of that city is situated on a portion of the first claim located by the lucky quar-

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical fraternity. Catarrh being a constitutional disease, requires a onstitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

Not Desirable.

It is a great thing, or so considered, for a woman to obtain a Government clerkship at Washington. The most pallid, the most exhausted, the most unhappy set of women I

have ever seen were the department clerks in Washington at 5 o'clock of a very hot day. Hent for rooms in Washington is very high, the clerks mostly eat at cheap restaurants, and two meals is said to be the order of the day with most of them. The woman on the farm who has plenty of milk and butter and bread would stare at the small modicum deemed su cient to feed a Government clerk. She would declare that the "interesting pallor" was an "interesting star vation," and there is much truth in the idea - Womankind.
